

Sportscover Vital: Risk management & communication tool for sport

The Perfect Solution

Sportcover Vital is a risk management system that automatically keeps medical and emergency details up to date for sporting organisations with a duty of care. It makes the details instantly available to authorised staff on their mobile devices in an emergency, so they know who to call, what to do, or what to tell an ambulance paramedic at the critical time.

- ✓ Reduce the risk of medical errors and lost time in emergencies. First responders know what to do and who to call!
- ✓ Give adult members and parents/guardians ownership and control of details, ensuring emergency and medical information is up to date
- ✓ Save time with automatic reminders to chase members or parents/guardians to complete missing emergency contacts and medical details
- ✓ Prepare your team officials with instant access to emergency data on their mobile phone or tablet - even when offline . No more paper files to carry around, and emergency details are much more accessible when required. Also safer and more secure than paper forms!
- ✓ Log injuries on mobile devices at the time of the incident. Sportscover Vital creates an injury database for your sport
- ✓ Built in messaging to email or SMS team members or parents/guardians
